OUTDOOR WIRELESS TEMPERATURE TRANSMITTER AND RECEIVER KIT

LUXPRO® Part No. WTR064

82°

***Accurately Displays
Current Outdoor Temperature
on the PUREPRO™ Thermostat and
Enables Dual Fuel and
Automatic Humidity Capability***

Outdoor Wireless Temperature
Transmitter and Receiver Kit Includes:

Transmitter

Antenna

Receiver Module

2 AA Batteries

U.S. Patent: 6,902,117

**Introducing the PUREPRO™ DP732T touch-screen thermostat with 3-stage heating, 2-stage cooling control, an automatic humidity controller and fossil fuel switch
(Available only when combined with LUXPRO® Outdoor Wireless Transmitter and Receiver Kit. LUXPRO® Part No. WTR064)**

- 7 Day programmable with 4 events per day - including fan
- Large, easy to read dot matrix display
- True touch screen technology
- Automatic selection of cool or heat mode
- Programmable fan mode
- Programmable filter monitor
- Programmable installer message
- Configurable humidification relay
- Independent de-humidification relay
- Customizable full and partial lock security
- Adjustable differential settings for multistage installations
- Energy watch calculates kWh consumption and real time HVAC cost
- Simple mode for non-programmable usage
- Programmable Vacation Mode

GLOSSARY OF TERMS

CYCLE RATE - Cycle rate is the frequency that heating or cooling equipment is turned on during a certain period of time. Cycle rate is often given in units of cycles per hour (CPH).

DEHUMIDIFY - The process of removing moisture from the air.

DEHUMIDIFIER - Device used to remove moisture from the air.

DIFFERENTIAL - Differential is defined as the difference between the cut-in and cut-out points as measured at the thermostat under specified operating conditions. For example, if the thermostat turns the heating equipment on at 70 degrees F and turns the heating equipment off at 74 degrees F, then the differential is 4 degrees F.

HUMIDIFIER - A device used to add moisture to a space.

HUMIDISTAT - A control which is operates the humidifier and is affected by changing humidity.

HUMIDITY - Moisture in the air.

PROGRAMMABLE THERMOSTAT - A thermostat with the capability of automatically adjusting temperature set point to pre-selected settings at pre-selected times.

SETBACK - The automatic alteration of the thermostat control point(s) by means other than manually changing the temperature set point.

SET POINT - The desired temperature setting on an electromechanical or electronic thermostat.

SELECTING A LOCATION

Install your PUREPRO™ thermostat approximately 5 feet (1.5 meters) above the floor in an area with good air circulation.

Avoid the following locations:

- Hot or cold air from ducts
- Radiant heat for appliances or sun such as a skylight
- Unheated or uncooled areas: for example an outside wall behind the thermostat.
- Ensure that there is no furniture directly below or beside the thermostat.

MOUNTING THE THERMOSTAT TO THE WALL

1. Make sure to turn off the power supply located at the electrical service panel. All heating and cooling units should be OFF.
2. Separate the backplate from the thermostat by grasping the unit firmly at the bottom lip and pulling gently until the two piece are apart.
3. Align the backplate to the wall.
4. Mark the three locations for drilling the 3/16" holes required for the plastic screw anchors.
5. Remove the backplate and drill the three 3/16" holes in these locations.
6. Insert the plastic gyproc screws and ensure that they are snug in the wall.
7. Securely mount the backplate to the wall with the 3 supplied screws.
8. Make the appropriate wire connections based on the specifications of the household HVAC unit(s). Please refer to Wiring Table to determine the appropriate wire connections.
9. Place the thermostat on the backplate by firmly but gently from the top aligning the pins with the screw terminals.
10. Turn on the electricity at the electrical service panel.

CONTROL SCREEN

➤ To access the CONTROL SCREEN, simply touch the HOME SCREEN Screen... anywhere!

➤ From the CONTROL SCREEN, you can:

 67.0  Change the Temperature Setpoint(s) using - and + buttons.
In AUTO MODE toggle the Heat/Cool button (Heat or Cool will flash once selected), then raise or lower setpoints as desired.

 48  Change the Humidity Setpoint using - and + buttons.

  Select the Thermostat Operation Mode by toggling thermostat operation mode button.

     Select the Temperature Control Mode by toggling the temperature control mode button.

   Select the Fan Operation Mode by toggling the fan operation mode button.

  Select the Humidity Control mode by toggling the humidity control mode button.¹

 Access MENU SCREEN to enter into all thermostat features and settings.

 Displays Installer Message to review important information.

¹ Available only in combination with WIRELESS OUTDOOR TEMPERATURE TRANSMITTER AND RECEIVER KIT (WTR064)

THERMOSTAT OPERATION MODES

➤ **PUREPRO™** thermostat can operate in **PROGRAM MODE** or can **HOLD** a fixed temperature.

**RUN
PROG**

RUN PROGRAM: the thermostat initiates the 7-day Programmable Temperature Control Program with 4 independent events per day. To set up a custom temperature control program with customizable Temperature Setpoint and Fan operation mode, refer to Section PROGRAM SETTINGS (page 27).

**HOLD
TEMP**

HOLD TEMPERATURE: the thermostat regulates the room temperature as determined by the selected Temperature Setpoint.

TEMPERATURE CONTROL MODES

➤ Based on your HVAC equipment PUREPRO™ thermostat can operate in the following temperature control modes - **AUTO** or **HEAT** or **EMERGENCY HEAT** or **COOL** or **OFF**

AUTO

AUTO - the thermostat keeps the room temperature between the selected **HEAT** and **COOL** setpoints by using both the cooling and heating HVAC units.

HEAT

HEAT - the thermostat only turns on the heating units to regulate room temperature.

**EMER
HEAT**

EMERGENCY HEAT - the thermostat enables the emergency heat (if required).

COOL

COOL - the thermostat only turns on the air conditioning to regulate room temperature.

OFF

OFF - the thermostat will not control temperature. the thermostat will continue to display the current room temperature, current room humidity and outdoor temperature.

AUTOMATIC HUMIDITY CONTROL

➤ In order to reduce condensation, humidity must be controlled and air movement must be generated. As the exterior temperature drops, the humidity level needs to decrease if condensation is to be controlled.

HUMIDITY AUTO

HUMIDITY AUTO: the thermostat automatically adjusts the humidity setpoint based on the current indoor temperature and humidity as well as the current outdoor temperature in order to maintain a maximum comfort level and eliminate condensation. The automatic humidity setpoint is determined according to the following standard humidity table.¹

Setpoint	Outdoor Temp in °C	Outdoor Temp in °F
15%	-29°C	-20°F
20%	-24°C	-10°F
25%	-18°C	0°F
30%	-12°C	10°F
35%	-7°C	20°F
40%	-7°C	-20°F

HUMIDITY MANUAL

HUMIDITY MANUAL: The user selects the humidity setpoint.

¹ Available only in combination with WIRELESS OUTDOOR TEMPERATURE TRANSMITTER AND RECEIVER KIT (WTR064)

HUMIDIFY AND HUMIDITY SETPOINT

➤ **HUMIDIFY SETPOINT:** Allows you to increase and maintain the relative humidity at a specific setpoint. Once you choose **HUMIDIFY** follow these easy steps:

- The **HUM** setpoint with - and + icons allow you to lower and raise your setpoint.
- * *Example of the typical use of the Humidify Function: If the current humidity is 30% your PUREPRO™ thermostat will initiate the humidifier to function until Setpoint 50% is reached. In order to humidify you must set the humidity setpoint above the current humidity.*

DE-HUMIDIFY AND HUMIDITY SETPOINT

➤ **DE-HUMIDIFY SETPOINT:** Allows you to reduce and maintain the relative humidity at a specific setpoint.

➤ Please note that this feature functions in the COOL Mode only. Your PUREPRO™ thermostat must be configured to control a cooling unit such as an air conditioner or heat pump. Once you choose De-Humidify follow these easy steps:

- The **DH SETPOINT** with - and + icons allow you to lower and raise your setpoint

➤ *Example of typical use of the De-Humidify function: In order to de-humidify you must set the de-humidify setpoint below the current relative humidity. Your PUREPRO™ thermostat will both lower and regulate temperature to the cooling setpoint while monitoring and lowering the room humidity.*

Since the De-Humidify feature uses the COOL Function of your Air Conditioner or Heat Pump, your PUREPRO™ thermostat will turn off the air conditioning if either the dehumidifier setpoint or temperature setpoint is reached - whichever comes first.

FAN OPERATION MODES

➤ PUREPRO™ thermostat can operate the fan in one of the following three modes:

FAN AUTO: The fan runs only when there is a demand for heating or cooling.

FAN ON: The fan runs continuously

FAN INTERMITTENT: The fan runs 10 minutes per 1/2 hour providing a convenient way to improve air quality and save energy.

When the fan is running, the animated fan icon will appear on the HOME SCREEN.

MENU SCREEN

➤ To access the **MENU SCREEN**, simply touch **MENU** from the **CONTROL SCREEN**.

➤ From the **MENU** page, you can:

**DATE/TIME
SETTINGS**

Access **DATE AND TIME SETTINGS** to enter the accurate date and time

**PROGRAM
SETTINGS**

Access **PROGRAM SETTINGS** to pre-program temperature changes during each day of the week.

**ENERGY
WATCH**

Access **ENERGY WATCH** to display kWh consumption and the dollar cost of operating the HVAC System

**CLEAN
SCREEN**

CLEAN SCREEN places the touch screen in a sleep mode for 15 seconds which allows you to wipe the screen with a dampened cloth.

**SET
SCREEN**

Access the **SET SCREEN** menu to change screen properties.

**VACATION
SETTINGS**

Access **VACATION SETTINGS** to activate the **VACATION MODE**

**FILTER
MONITOR**

Access **FILTER MONITOR** to review days of "fan run time."

MENU SCREEN

HUMIDIFY

DEHUMIDIFY

Select **HUMIDIFY** or **DE-HUMIDIFY** Control Mode by toggling the humidity control mode button.

HUMIDIFY

HUMIDIFY increases and maintains the relative humidity of the room at a humidity setpoint selected on the CONTROL SCREEN.

DEHUMIDIFY

DE-HUMIDIFY reduces and maintains the relative humidity of the room at a humidity setpoint selected on the CONTROL SCREEN.

Please note that DE-HUMIDIFY feature functions only in COOL mode. PUREPRO™ thermostat will regulate both the room temperature and the room humidity at the same time. If DE-HUMIDIFY setpoint reached before the temperature COOL setpoint, the air conditioning will turn off before the temperature setpoint is reached. This feature has been specially designed to save energy without compromising the comfort.

ADVANCED
SETTINGS

Access **ADVANCED SETTINGS** to configure the thermostat. To access the ADVANCED SETTINGS, hold the ADVANCED SETTINGS button for 5 seconds. The thermostat will continuously beep for 5 seconds to indicate that you are in the process of entering this feature.

- ! CAUTION** Altering the system properties in the **ADVANCED SETTINGS** may affect the performance of the HVAC system and should be performed only by a qualified installer.

DATE AND TIME SETTINGS

Select the **12 OR 24 HOUR CLOCK** display by pushing the corresponding button.

Set the **TIME** by toggling hour, minute and AM/PM buttons.

Set the **DATE** by toggling Month, Day and Year buttons.

PROGRAM SETTINGS

PROGRAM SETTINGS feature allows you to easily and quickly program daily temperature changes to fit your lifestyle and reduce energy consumption. You can customize the program for each day of the week with 4 independent temperature and fan operation settings per day. To setup your program:

Select the **DAY OF THE WEEK**

Select the **EVENT NUMBER** by toggling the Event Number button

Choose desired **FAN OPERATION MODE** by fan operation mode button.

Enter the event **START TIME** with Hour/Minute and AM/PM buttons

Choose desired **TEMPERATURE SETPOINT** with - and + buttons

Select the next event and repeat the steps described above. Once finished, select the next day of the week that you would like to program. the thermostat will prompt you to copy the settings. Repeat steps to program other days of the week.

ENERGY WATCH

ENERGY WATCH

ENERGY WATCH feature provides a report on the energy consumption and the dollar cost of operating your HVAC system (for up to the last 255 days).

Once the cost of the kWh per compressor, furnace and fan have been entered into the ENERGY WATCH Settings (see page 32) Energy Watch will display the consumption as well as the real time dollar cost of the HVAC system.

Otherwise, ENERGY WATCH will display only the total time the Compressor and the Furnace have been operating.

- **BACKLIGHT:** Select between automatic and permanent backlight for the screen.

AUTO

AUTO: The screen back-light will come on only when you touch the screen.

ON

ON: Screen will constantly be back-lit.

- **REVERSE:** Select the positive or negative screen display.

ON

ON: Negative Display (Dark Background)

OFF

OFF: Positive Display (Light Background)

- **NIGHT REVERSE:** changes the touch screen background at night for improved display under low-lighting conditions. Select between:

ON

ON: the screen automatically reverses the background at 9PM and returns to the normal display at 6:00AM .

OFF

OFF: screen background is determined by REVERSE function.

- **CONTRAST:** Toggle the screen contrast settings button (1-10) to select the screen contrast that suits best your thermostat surroundings. PUREPRO™ recommends the setting of 7.

VACATION MODE

➤ **VACATION SETTINGS** allows you to set the temperature to a fixed setpoint during the time you are on vacation, providing energy savings without compromising comfort upon your return.

IMPORTANT: HEAT or COOL must be selected from the CONTROL SCREEN before entering the Vacation Settings screen.

To begin select Vacation Mode ON:

Select the **START** Date

Select the **END** Date

Adjust the **HEAT** or **COOL** temperature setpoint: the Vacation mode begins at 10 PM on the day of your departure and ends at Midnight on the day of your arrival.

When the Vacation mode is active the suitcase icon appears on the **HOME SCREEN**. Upon your return, the message **VACATION MODE ENDED** will be displayed on the screen. Simply touch the screen, and your PUREPRO™ thermostat will automatically revert to the Program Settings if you are in **RUN PROGRAM** or to **HOLD TEMPERATURE** operation mode.

**FILTER
MONITOR**

FILTER MONITOR: Displays filter usage in days

RESET

RESET: Resets filter timer (You should reset FILTER MONITOR after changing the air filter.

When activated the FILTER MONITOR icon appears on your HOME SCREEN - this feature must be activated in ADVANCED SETTINGS.

ADVANCED SETTINGS - FEATURES SETTINGS

- **DAYLIGHT TIME:** Choose Daylight Time **ON** or **OFF** dependent on your Time Zone.

FILTER: Enter the air filter "fan run time" information here. The Filter Monitor feature uses this information to inform you when to change your air filter by displaying CHANGE FILTER icon on the HOME SCREEN.

ENERGY WATCH: Enter the HVAC system consumption parameters (rounded off to kW) as well as your electrical energy cost (¢/kW) and the ENERGY WATCH feature will display a real time totals of electrical energy consumption and cost. To review touch the ENERGY WATCH button on the MENU SCREEN.

* *EXAMPLE: Fan 1kW, Heat Pump 1kW/ton, Furnace 5-30 kW, 7-9¢/kW*

ENERGY WATCH feature will run consecutively for 255 days. If you do not enter your information what will appear on the display is the total time the Compressor and the Furnace have been operating.

Select temperature display in either **CELSIUS** or **FAHRENHEIT** degrees by toggling the °C / °F button to either °C or °F.

ADVANCED SETTINGS - FEATURES SETTINGS

SECURITY

SECURITY: The security settings allow you to protect your PUREPRO™ thermostat from unauthorized use.

ON OFF

Turn Security **ON** or **OFF**. You will be prompted to enter the PIN. The Default PIN 1111.

CHANGE PIN

To **CHANGE PIN**, enter your new PIN and then, when prompted, re-enter your new PIN.

FULL LOCK

Choose a security mode by toggling SECURITY MODE button:

FULL LOCK does not allow any changes unless the user enters the PIN.

PARTIAL LOCK

PARTIAL LOCK allows you to change only the temperature setpoint without entering a PIN.

INSTALLER

Enter the **INSTALLER MESSAGE:** (up to 42 characters) to appear at programmable intervals. Type the message using the keyboard, and push OK button to confirm. You will be prompted to enter the number of months after which you would like the message to appear.

ADVANCED SETTINGS - SYSTEM CONFIGURATION

! **IMPORTANT:** By inadvertently modifying system configuration settings, you may seriously degrade HVAC system performance.

➤ Choose system heating and cooling equipment - remember all you need to do is toggle the appropriate button until the correct setting appears.

- Choose **HEAT PUMP** or **2 STAGE HEAT PUMP** or **AIR CONDITIONING** or **NO COMPRESSOR** - please review the wiring table and diagram for wiring instructions.
- Choose **FURNACE OFF** (No Furnace) or **ELECTRIC FURNACE** or **EMERGENCY ELECTRICAL FURNACE** (additional electric furnace which will come on in emergency mode in conjunction with electric furnace) or **GAS FURNACE** or **OIL FURNACE** or **2 STAGE GAS FURNACE**; please review the wiring table and diagram for wiring instructions.
- **CYCLE RATE:** Set Maximum compressor cycles per hour. We recommend that the factory default be maintained for optimal performance..
- **AUTO CHANGE:** Set the minimum difference between Auto Mode, Heat and Cool temperature set-points. We recommend that the factory default be maintained for optimal performance.

ADVANCED SETTINGS - DUAL FUEL SWITCH

- !** **IMPORTANT:** This feature can only be activated when used with the LUXPRO® Outdoor Wireless Temperature Transmitter and Receiver. Please install the LUXPRO® Outdoor Wireless Temperature Transmitter and Receiver before activating this feature.

Increasing energy efficiency and reducing costs can be achieved by using the dual fuel switch. Your heat pump can generally provide heat and comfort without assistance to an outside temperature of just a few degrees below freezing. This temperature is called the heat pump balance point. When the outside temperature is above the balance point, the heat pump alone is sufficient for heating.

Once the outdoor temperature drops to the balance point the heat pump must be assisted by your alternate energy source. When the outdoor temperature drops below the systems normal crossover temperature (-12°C or -15°C), your heat pump will stop operating and the alternate energy source will take over.

- HP Cut **ON** or **OFF**
- Cut Temperature:
 - +/- Temperature in Celsius (-5°C to 25°C)
 - +/- Temperature in Fahrenheit (13°F to 41°F)

ADVANCED SETTINGS - DIFFERENTIAL SETTINGS

➤ **PUREPRO™ DP732T allows you to control up to 3 Stages of Heating and 2 Stages of Cooling, dependent on the type of system you have configured.**

- **1ST STAGE DIFFERENTIAL:** Set temperature difference between temperature set point and actual temperature reading before 1st stage heating or cooling is initiated.
- **2ND STAGE DIFFERENTIAL:** Set temperature difference between 1st stage initiation and 2nd stage heating or cooling initiation.
- **3RD STAGE DIFFERENTIAL:** Set temperature difference between 2nd stage initiation and 3rd stage heating or cooling initiation.
- **OB ENERGIZED:** Reverses the Heat Pump OB Valve contact to HEAT or COOL (manufacturer dependent).

ADVANCED SETTINGS - TIMER FEATURE

- Specify the number of minutes for which Stage 1 will function until Stage 2 is activated to help raise (or cool) temperature (if the temperature set point is not reached). This unique function avoids excess compressor wear in the case where the necessary temperature set point is not met through setting of the Staging Differential. Set to "00" to disable.

ADVANCED SETTINGS - HEAT PUMP

- **HP ON** when Furnace On: Heat Pump and Furnace can operate together when 2nd stage furnace is required. HP "OFF" when Furnace On: turns off the Heat Pump when the furnace is On (required on some gas or oil furnaces).

ADVANCED SETTINGS - HUMIDITY SETTINGS

➤ **IMPORTANT:** The Automatic Humidity Control feature can only be activated when used with the LUXPRO® Outdoor Wireless Temperature Transmitter and Receiver. Please install the LUXPRO® Outdoor Wireless Temperature Transmitter and Receiver before activating this feature.

Automatic Humidity Control: Automatic humidity control is an option that lets your system automatically adjust indoor humidity based on current outdoor conditions. This function minimizes destructive condensation build-up on your windows.

- **HUM FAN: ON** - fan runs when there is an independent demand to humidify. **OFF:** fan only runs when there is a demand to humidify while heating or cooling.
- **DH FAN: ON** - fan runs when there is an independent demand to dehumidify. **OFF:** fan only runs when there is a demand to dehumidify while cooling.
- **DH REVERSE: ON** - DH relay is normally closed when relative humidity is above DH set point. **OFF:** DH relay is normally open when relative humidity is above DH set point.
- **DH CONTROL COMPRESSOR: ON** - Thermostat will turn off the air conditioning if either the dehumidify set point or the temperature set point is reached, whichever comes first, both DH relay and compressor will turn off. **OFF:** DH relay is independent of compressor activity (DH becomes a spare relay and can be used for a variable speed fan or separate dehumidifier or air exchanger)

ADVANCED SETTINGS - HUMIDITY SETTINGS

➤ Operating Tips

- **HUMIDIFICATION FAN** should be set to **ON** when running steam or mist humidifiers.
- **HUMIDIFICATION FAN** should be set to **OFF** when running drum humidifiers or any other humidifier that requires the furnace to run in order to make humidity.
- **DE-HUMIDIFICATION FAN (DH)** should be set to on when running separate de-humidification equipment.
- **DE-HUMIDIFICATION FAN (DH)** may be set to off when using the air conditioning as a means of de-humidification. It may advantageous in some environments to turn the fan on independently when there is a call for DH in order to distribute the humidity level more evenly.
- **DH REVERSE** function can be configured to meet the requirements of many variable speed fans, consult the manual of your variable speed fan and determine if an “open” or “closed” contact results in slowing fan operation.

ADVANCED SETTINGS - HUMIDITY SETTINGS

➤ De-humidification options for increasing comfort and efficiency

- HRV/ERV units can be controlled by simply connecting the DH terminal on the thermostat to the terminal DH of the HRV/ERV. Most HRV/ERV units will control properly with the DH REVERSE feature turned off (contact normally open).
- **OPTION 1:** In Advanced Settings choose DHControlComp, set to ON then lower the temperature to a minimum safe set point, finally set the desired de-humidify level, de-humidify will control the compressor (unless minimum temperature set point is reached) whichever comes first.
- **OPTION 2:** Connect terminal DH to Y1 and set thermostat to de-humidify mode then regardless of temperature the de-humidification setting will have priority. Caution: This method will run the compressor until the de-humidification level is reached and may cause overcooling.
- **OPTION 3:** Connect the DH terminal to a variable speed fan control, (set DH REVERSE to control the fan so that low speed is activated to de-humidify). This method provides maximum comfort while maintaining the temperature in cooling mode.

ADVANCED SETTINGS - CALIBRATION

➤ Calibration of Temperature or Relative Humidity

Your PUREPRO™ thermostat is rated for $\pm 1^{\circ}\text{F}$ ($\pm 0.5^{\circ}\text{C}$) temperature accuracy and $\pm 4\%$ for relative humidity accuracy.

If you have determined due to drafts, sunlight or other environmental factors that your thermostat requires calibration, follow this easy guide. Common cause of offset are lack of air circulation, drafts or skylights in the direct vicinity of your PUREPRO™ thermostat.

Measure humidity with a conventional hygrometer or any other device that provides a accurate reading. Compare to the humidity reading on your PUREPRO™ thermostat and calibrate by $\pm 20\%$.

ADVANCED SETTINGS - CALIBRATION

➤ Temperature Calibration Table

- Determine the temperature difference using an accurate thermometer and use the following table to calibrate your thermostat. The thermostat temperature reading can be calibrated by $\pm 19^{\circ}\text{F}$ ($\pm 9.5^{\circ}\text{C}$).

Calibration Number	$^{\circ}\text{C}$ Change	$^{\circ}\text{F}$ Change
± 0.0	$\pm 0.0^{\circ}\text{F}$	$\pm 0.0^{\circ}\text{C}$
± 0.5	$\pm 1^{\circ}\text{F}$	$\pm 0.5^{\circ}\text{C}$
± 1.0	$\pm 2^{\circ}\text{F}$	$\pm 1.0^{\circ}\text{C}$
± 1.5	$\pm 3^{\circ}\text{F}$	$\pm 1.5^{\circ}\text{C}$
± 2.0	$\pm 4^{\circ}\text{F}$	$\pm 2.0^{\circ}\text{C}$
± 2.5	$\pm 5^{\circ}\text{F}$	$\pm 2.5^{\circ}\text{C}$
± 3.0	$\pm 6^{\circ}\text{F}$	$\pm 3.0^{\circ}\text{C}$
± 3.5	$\pm 7^{\circ}\text{F}$	$\pm 3.5^{\circ}\text{C}$
± 4.0	$\pm 8^{\circ}\text{F}$	$\pm 4.0^{\circ}\text{C}$
± 4.5	$\pm 9^{\circ}\text{F}$	$\pm 4.5^{\circ}\text{C}$
± 5.0	$\pm 10^{\circ}\text{F}$	$\pm 5.0^{\circ}\text{C}$
± 5.5	$\pm 11^{\circ}\text{F}$	$\pm 5.5^{\circ}\text{C}$
± 6.0	$\pm 12^{\circ}\text{F}$	$\pm 6.0^{\circ}\text{C}$
± 6.5	$\pm 13^{\circ}\text{F}$	$\pm 6.5^{\circ}\text{C}$
± 7.0	$\pm 14^{\circ}\text{F}$	$\pm 7.0^{\circ}\text{C}$
± 7.5	$\pm 15^{\circ}\text{F}$	$\pm 7.5^{\circ}\text{C}$
± 8.0	$\pm 16^{\circ}\text{F}$	$\pm 8.0^{\circ}\text{C}$
± 8.5	$\pm 17^{\circ}\text{F}$	$\pm 8.5^{\circ}\text{C}$
± 9.0	$\pm 18^{\circ}\text{F}$	$\pm 9.0^{\circ}\text{C}$
± 9.5	$\pm 19^{\circ}\text{F}$	$\pm 9.5^{\circ}\text{C}$

SIMPLE THERMOSTAT MODE

➤ PUREPRO™ thermostat can also function as a virtual non-programmable thermostat after it has been switched to a "SIMPLE MODE".

➤ To enable "SIMPLE MODE", press the reset button (take off the thermostat faceplate and press the reset button located in the bottom right-hand corner). The message "Touch for simple thermostat" will appear. Touch the screen **immediately**, and your PUREPRO™ thermostat becomes a simplified non-programmable thermostat.

➤ "SIMPLE MODE" has the following temperature control modes:

➤ "SIMPLE MODE" has the following fan operation modes:

Please note that when entering "Simple Mode" all configurations and settings are stored permanently.

➤ To revert back to the Programmable PUREPRO™ thermostat, simply press the reset button and touch the screen when the message "Touch for Programmable Thermostat" appears.

TROUBLESHOOTING

- ? **Touch screen buttons do not function properly.** Remove cover, press the reset button located in the bottom left corner then accurately touch 3 target centers on the screen when prompted.
- ? **Air Conditioning does not turn on even when room temperature is higher then the temperature set point set point.** DHCONTROLCOMP is turned ON and dehumidify set point has been reached. This will cause air conditioning to turn off. Lower Setpoint - Page 17, 21; Dh CONTROLCOMP - Page 39.
- ? **Air conditioning turns on in HEAT mode and heating turns on in COOL mode.** Reverse the OB valve (see “Advanced Settings” Page 36).
- ? **PARTIAL LOCK and FULL LOCK do not function.** You must not touch the screen for 1 minute for PUREPRO™ thermostat to automatically lock.
- ? **Thermostat appears normal until the screen becomes blank when the compressor or heating system turns on.** You need to connect the “C” wire. 4 wire system will not function unless the heat and compressor contactors can supply enough current to power the thermostat with only 4 wires, if you cannot hook up the “C” wire another possible solution is to connect one 250 ohm 10 watt resistor in the HVAC room, for cooling problems between C and W or in the case of heating problem between C and Y1.
- ? **I forgot my PIN and cannot unlock the thermostat.** Remove the cover plate, press the reset button located in the bottom right corner, as soon as the message “touch to reset password” appears touch the screen, your PIN will be erased and the thermostat will unlock.

IMPORTANT NOTICE

➤ WHEN USING THIS THERMOSTAT WITH A GAS FURNACE A COMMON WIRE (C) MUST BE CONNECTED.

When working without a common wire:

- A confirm in HEAT MODE the cooling does not switch on or B confirm in COOL MODE the heat does not switch on.
- If test A or B fail or the thermostat shuts down in either HEAT or COOL MODE then it is necessary to connect a common wire, (C), alternatively it may be possible to solve this issue by simply connecting the 250 ohm 10 watt resistor between C and W (in the case of a cooling problem - see B) or between C and Y1 (in the case of a heating problem - see A) at the HVAC equipment.
- When working without a common wire, A confirm that when there is a call for heat, cooling does not also activate, and when there is a call for cool, heating does not also activate.
- If using the configuration of Heat Pump and Furnace with no Common Wire confirm that when Heat Pump and Furnace are working together (both stages are operating at the same time) that the display does not go blank, if so you must use a Common Wire.
- This thermostat is equipped to run with two separated power transformers if required RC and RH. Terminals RC and RH are internally connected together however you should wish to use two transformers simply cut with a blade the copper trace on the printed circuit board located between the C and Y2 screw terminals.

WARRANTY

LIMITED WARRANTY:

If this unit fails because of defects in materials or workmanship within three years of the date of original purchase, LUX Products Corporation will, at its option, repair or replace it. This warranty does not cover damage by accident, misuse, or failure to follow installation instructions. Implied warranties are limited in duration to three years from the date of original purchase. Some states do not allow limitations on how long an implied warranty lasts, so the above limitation may not apply to you. Please return malfunctioning or defective units to the location from which the purchase was made, along with proof of purchase. Please refer to "TECHNICAL ASSISTANCE" before returning thermostat. Purchaser assumes all risks and liability for incidental and consequential damage resulting from installation and use of this unit. Some states do not allow the exclusion of incidental or consequential damages, so the above exclusion may not apply to you. This warranty gives you specific legal rights and you may also have other rights which vary from state to state. Applicable in the U.S.A. and Canada only.

TECHNICAL ASSISTANCE

If you have any problems installing or using this thermostat, please reread the instructions carefully or visit our online technical support at www.luxproproducts.com. If you require assistance, please call our Technical Assistance number between 8:00 a.m. and 4:30 p.m. Eastern Standard Time, Monday through Friday. The number is (856) 234-8803.

DIMENSIONS

Case: 6.5" x 4.6" x 1.25"
Screen: 3.625" x 2.125"

ELECTRICAL RATING

24 volt AC/DC
Class 2 maximum 2 amps
Temperature Accuracy $\pm 1^{\circ}\text{F}$ ($\pm 0.5^{\circ}\text{C}$)
Humidity Accuracy $\pm 4\%\text{RH}$

PATENTS

7,185,825; 7,156,318; 7,145,110; 7,050,026; 7,028,912; 6,902,117; 6,786,421; Other Patents Pending

FCC STATEMENT THIS DEVICE COMPLIES WITH PART 15 OF THE FCC RULES. OPERATION IS SUBJECT TO THE FOLLOWING TWO CONDITIONS: (1) THIS DEVICE MAY NOT CAUSE HARMFUL INTERFERENCE, AND (2) THIS DEVICE MUST ACCEPT ANY INTERFERENCE RECEIVED, INCLUDING INTERFERENCE THAT MAY CAUSE UNDESIRED OPERATION.
